Other Qualities of Cub Creek Water

Temperature

Dissolved Oxygen

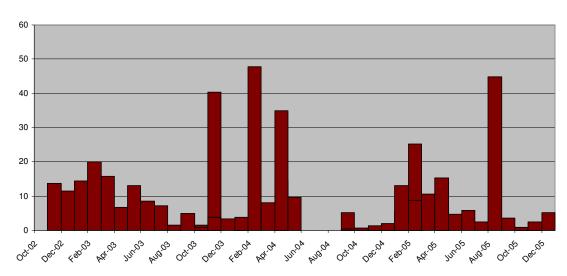

- Fish need oxygen to survive
- Makes water taste better
- Cold water holds more dissolved oxygen.

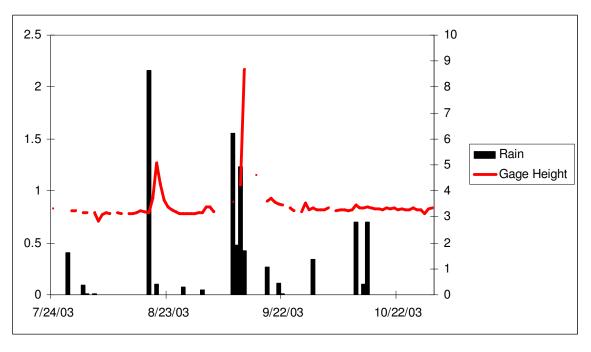

Flow Rate

- The volume of water a stream or river discharges over a given amount of time.
- It is measured by multiplying the surface velocity (m/s) by the average depth and average width.
- Naturally has a large amount of variation from spring floods to low flows in the late summer. Humans control flow rate with dams and other water control structures.
